**keywords:** 2-5 English keywords. These words should be written in lowercase except for abbreviations or proper nouns

## Summary

---

summary in English, of which length is 200-500 words for regular papers.

---

## 1. Introduction

This is a sample of `jsaiart-jaws.cls`, a style file for JAWS using L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>. See `template209-{j,e}.tex` if you use L<sup>A</sup>T<sub>E</sub>X 2.09.

### 1.1 How to Use Stylefile for JAWS

Just put following line on top of your `.tex` file.

```
\documentclass[english,jaws]{jsaiart-jaws}
```

You need to compile it with `platex`, not `latex`, due to the limitation of original JSAI style files.

And you should use `jbibtex` instead of `bibtex` (or the `bibliography` environment).
